Information Decomposition on Structured Space

Mahito Sugiyama (Osaka Univ.)
Hiroyuki Nakahara (RIKEN), Koji Tsuda (UTokyo)

Contributions

- We build information geometry for posets (partially ordered sets)
 - Decomposition of KL divergence
- Key observations:
 - θ -coordinate \rightarrow principal ideals (lower sets) $\rightarrow p$ -coordinate
 - p -coordinate \rightarrow principal filters (upper sets) $\rightarrow \eta$ -coordinate
- Code: <https://git.io/decomp>

Conclusion

- We build **information geometry** for **posets** (partially ordered sets)
 - Natural connection between the information geometric **dual coordinates** and the **partial order structure**
 - Code: <https://git.io/decomp>
- We can decompose a probability distribution and assess the significance of any-order interactions
- Our results generalize the following:
 - S. Amari, *Information geometry on hierarchy of probability distributions*, [IEEE Trans. on Information Theory](#) (2001)
 - H. Nakahara, S. Amari, *Information-geometric measure for neural spikes*, [Neural Computation](#) (2002)
